Family Planning Infertility Solutions Women's Health

This **FertilityCare System** teaches a woman to make daily **standardized** observations, chart fertility biomarkers, and confidently identify the fertile and infertile days in her cycle. A couple can effectively use this information to **achieve or avoid pregnancy**, as well as to **maintain procreative wellness**.

Charting the cycle with this standardized system can reveal underlying health issues, including endometriosis, PCOS, and PMS. The **chart is a diagnostic foundation** for her medical assessments and treatment.

This **effective system** can be used at any stage of a woman's reproductive life, including **regular or irregular cycles, breastfeeding, coming off of hormonal birth control, infertility**, and more.

Fertility is a state of wellness. Embrace this **100% natural** system that works cooperatively with your body, appreciate your fertility, and maintain procreative health.
